FOREIGN NEWS ON GOATS AND MOHAIR

February 7, 1927.

RECEIVED  
FEB 15 1927

-----  
WORLD MOHAIR SITUATION

Although the production of mohair in 1926 in the Union of South Africa and Turkey is estimated to be only 3 per cent greater than that of 1925, stocks of foreign mohair in the United States on December 31, 1926, showed a large increase over the same date last year, according to the Foreign Service, United States Department of Agriculture. This situation is partly due to decreased consumption in the United Kingdom and an active demand in this country for mohair to be used in automobile cloth and in furniture upholstery. In 1926 the consumption of mohair in these industries in the United States is estimated to be one-third larger than 1925. Notwithstanding this marked increase in consumption, stocks of foreign mohair in bonded warehouses have greatly increased. Total imports for the year have amounted to nearly 11,000,000 pounds. The stocks in bonded customs warehouses at the beginning of the year 1926 amounted to about 3,400,000 pounds and on November 30, the last date for which we have figures, to 9,900,000 pounds. Stocks in dealers' hands are also believed to be heavier than usual at this time in the season. There is no evidence, on the other hand, of increased stocks in foreign countries.

The shipping of large quantities of foreign mohair to Boston in 1926 seems to have been due principally to reduced foreign demand. The United Kingdom, the greatest foreign consumer, in the past year has imported only about 11 million pounds of which 4 1/2 million were re-exported, whereas in the period 1921-25 she imported on the average 16 million, and before the war, averaged 30 million pounds. The decline in takings seems to be due largely to the loss of continental markets for mohair yarns and other manufactured products and to the use of artificial silk and other cheaper substitutes which have been found suitable for present day requirements in the production of certain textiles such as linings for which mohair was formerly largely used. Efforts are now being made in Bradford to develop in the British automobile industry an outlet for the product of Bradford spindles and looms capable of undertaking the upholstery type of manufacture, states the 1926 Trade Review of the Yorkshire Observer. Mohair fabrics of the type required for cars have been produced as examples of what the Bradford trade is capable of supplying to the automobile industry and it is strongly felt that the future of the mohair industry in England depends in no small degree upon linking it up with the expanding automobile trade. It is possible that with the recovery of economic conditions in the United Kingdom and in Germany there may be some increase in the demand for foreign mohair which will relieve the American market somewhat from the products of South Africa and Turkey.

Unofficial estimates of production in Turkey and the Union of South Africa, the largest producing countries other than the United States, place the 1926 clip at 20,000,000 pounds, compared with 19,400,000 in 1925 or an increase of 3 per cent. The production in the United States has been increasing rapidly in recent years and appears to be not far below the average post-war domestic requirements. The estimated production in the United States increased from a prewar average of about 4 million pounds to about 7 million in 1921 and has continued increasing up to the present time. That production is approaching the domestic requirements of recent years is indicated by the fact that for the period 1923-25 only 2,900,000 pounds were imported for consumption which also indicates that the total consumption of the United States for this period was probably between 12 and 13 million pounds. So long as our production continues to be no greater than our domestic requirements our producers will be in an advantageous position with reference to foreign producers. The price of domestic mohair in Boston now is nearly double the price of foreign mohair in bond.

Other countries producing angora goat's hair to any extent are China, Australia and a few other countries for which production statistics are not available. Average exports from China for the years 1921-25 were 3,276,000 pounds, compared with 1,769,000 pounds the average for 1909-13. Stocks in Turkey at the beginning of 1927 are estimated at 3,600,000 pounds, according to a report in the January issue of the Journal of the British Chamber of Commerce of Turkey and the Balkan States, published in the Wool Record and Textile World for January 13, 1927. This is a decrease of 18 per cent compared with the 4,400,000 pounds estimated to be on hand at the beginning of 1926. Stocks of mohair at Port Elizabeth on June 30, 1926, amounted to 1,090,000 pounds compared with 1,550,000 pounds at the corresponding date last year.

No estimates of the 1927 clips in these principal producing countries are as yet available. The clip of the Union of South Africa is due on the market in April or May and the Turkish clip about June. The number of angora goats shorn in the United States in 1925 is estimated to be 2,265,000 or about 17 per cent greater than the census of the number shorn in 1919. In the Union of South Africa the number of angora goats has declined to 2,137,000 in 1925, compared with an average of over 4,000,000 in prewar times and has probably been further reduced by the drought of 1926. Angora goats in Turkey numbered 2,761,000 in 1926 which shows an increase over numbers in recent years.

ANGORA GOATS AND MOHAIR: Production in the United States,  
the Union of South Africa, and Turkey, 1904-26.
